Duh Unsaid in the article but widely known to be true is that Apple has had MacOS compiling for ARM for years, just like how they had MacOS compiling for Intel years before they announced the switch from PowerPC — what Steve Jobs described as a “secret double life”.. If what Bloomberg is reporting is true — see footnote below, of course — they’re burying the lede.. Apple is preparing to release at least one Mac with its own chipnext year, according to the people.

There’s not much new information in this report, but what is new is interesting, and I want to focus on that.. Saying that the first ARM Mac processor will be based on the A14 is news Saying that the first ARM Mac processor will be “much faster than the processors in the iPhone and iPad” would be spectacular news, because the A13 in the iPhones 11 and new SE already offers faster single-core performance than a top-of-the-line MacBook Pro, and iPad Pros have better multi-core performance than MacBook Airs.. Bloomberg provides the news and analysis you require, whenever and wherever you need it.. In some Macs, Apple’s designs willdouble or quadruple the number of cores that Intel provides.
